

ENVIRONMENTAL POLICY

The Management of CINTRA, aware of the commitment that they have taken on with their clients and with the protection of the environment, have established the general objective of implementing and maintaining an environmental management system for the activities involved in the implantation and operation of transportation infrastructure concessions. The intention in doing so is for Cintra to remain a company of reference within its industry.

With the objective of achieving the preservation of the environment being a basic element in the culture of our company, the following requirements and commitments have been defined:

- To comply with environmental regulations and legislation as well as with the norms in effect in the different spheres of application, in addition to those established in the licenses, authorizations and environmental impact statements.
- To collaborate with the administration and competent bodies in the protection and preservation of the environment.
- To improve continually the efficiency of the environment management system, establishing and monitoring objectives.
- To protect the environment and to prevent pollution.
- To assess periodically environmental impacts associated with the activities of Cintra, such as waste generation, water pollution and atmospheric emissions, especially those that contribute most to climate change.
- To optimize the performance of all the processes as well as the use of natural resources and raw materials, controlling their impact on biodiversity and energy consumption.
- To include environmental needs in training programmes and promote the establishment of good environmental practices and continuous improvement in the process by the personnel of Cintra.

Achieving maximum respect for the environment in the products and services that we offer is the responsibility of everyone who works at CINTRA, as well as of our providers and subcontractors.
